

k-grip anti slip profiles

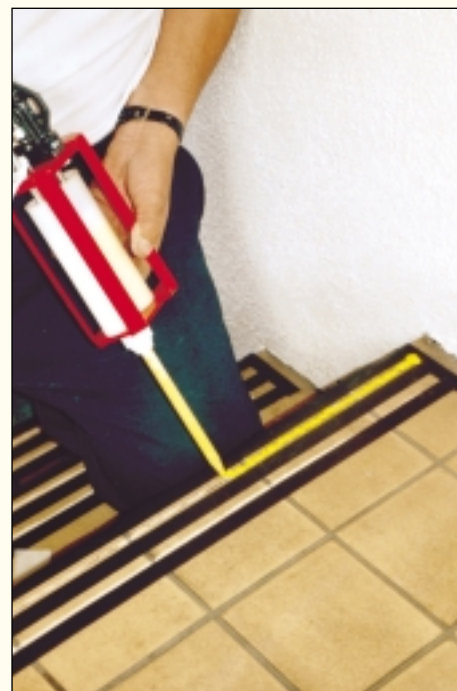

The provision of non-slip coatings to corridors, walk-ways and steps has become an important consideration for building owners, in the light of standards set out in the Disability and Discrimination Act 1995.

Metropolitan Stone is an approved applicator of the K-Grip anti-slip safety system which can be applied to step treads of almost any substrate, the most common being stone, concrete, metal and timber.

The substrate to receive the K-Grip must first be cleaned down to remove any dust and dirt deposits. Most substrates are then 'keyed' which involves forming a slot along the length of the designated strip area to help bond the product to the tread.

Strips of tape are then placed along either side of the strip area before the K-Grip is applied using a gun applicator. The product is then smoothed off to leave a strip which is then left to cure.

The product can be applied both internally and externally in a variety of colours and designs, and is considered one of the most versatile, durable and flexible products of its kind.

Stone Cleaning • Restoration • Marble Maintenance • Concrete Repair
